Cycling power

Ideal for bridging longer periods of low consumption, such as CCTV surveillance, security lighting, night-time power supply, and other applications that require a 24-hour power supply.

A higher load on the generator means it runs more efficiently, resulting in lower CO_2 emissions and reduced fuel consumption.

The battery uses the stored energy at night, so there is:

- **no** fuel consumption
- **no** CO_2 emissions
- **no** noise pollution
